## Executive Summary

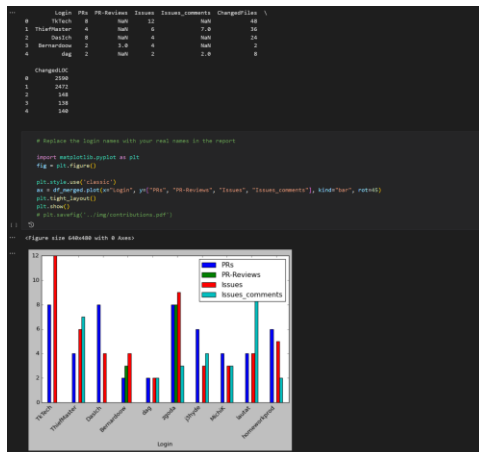

### Part1

This was the forking of the team's repository, that changes the contributors.txt by adding the name to it. This then makes the commit and push to the one who owns the team's repository.

### Part2

This one ended up having a folder created so that the files were inputted here this being the collectFiles. As the Token ends up being generated random from the github website. After the collectfiles is run and generates this.
